Web Development Project Type

Front-end, multi-page website prototypes

This collection is a front-end web development project built around static website prototypes. The examples use HTML to structure page content and CSS to define colours, spacing, navigation, and product or menu layouts. The screenshots show three concepts: an online shop, a cafe website, and a food ordering site. The visible GitHub repository includes separate HTML and CSS files.

Project category: Front-end web design and interface prototyping
Core technologies visible in the repository: HTML and CSS
Main purpose: Present information and demonstrate common customer-facing website layouts

EasyShop

Product discovery, category navigation, offers, and cart-oriented product cards.

Green Leaf Cafe

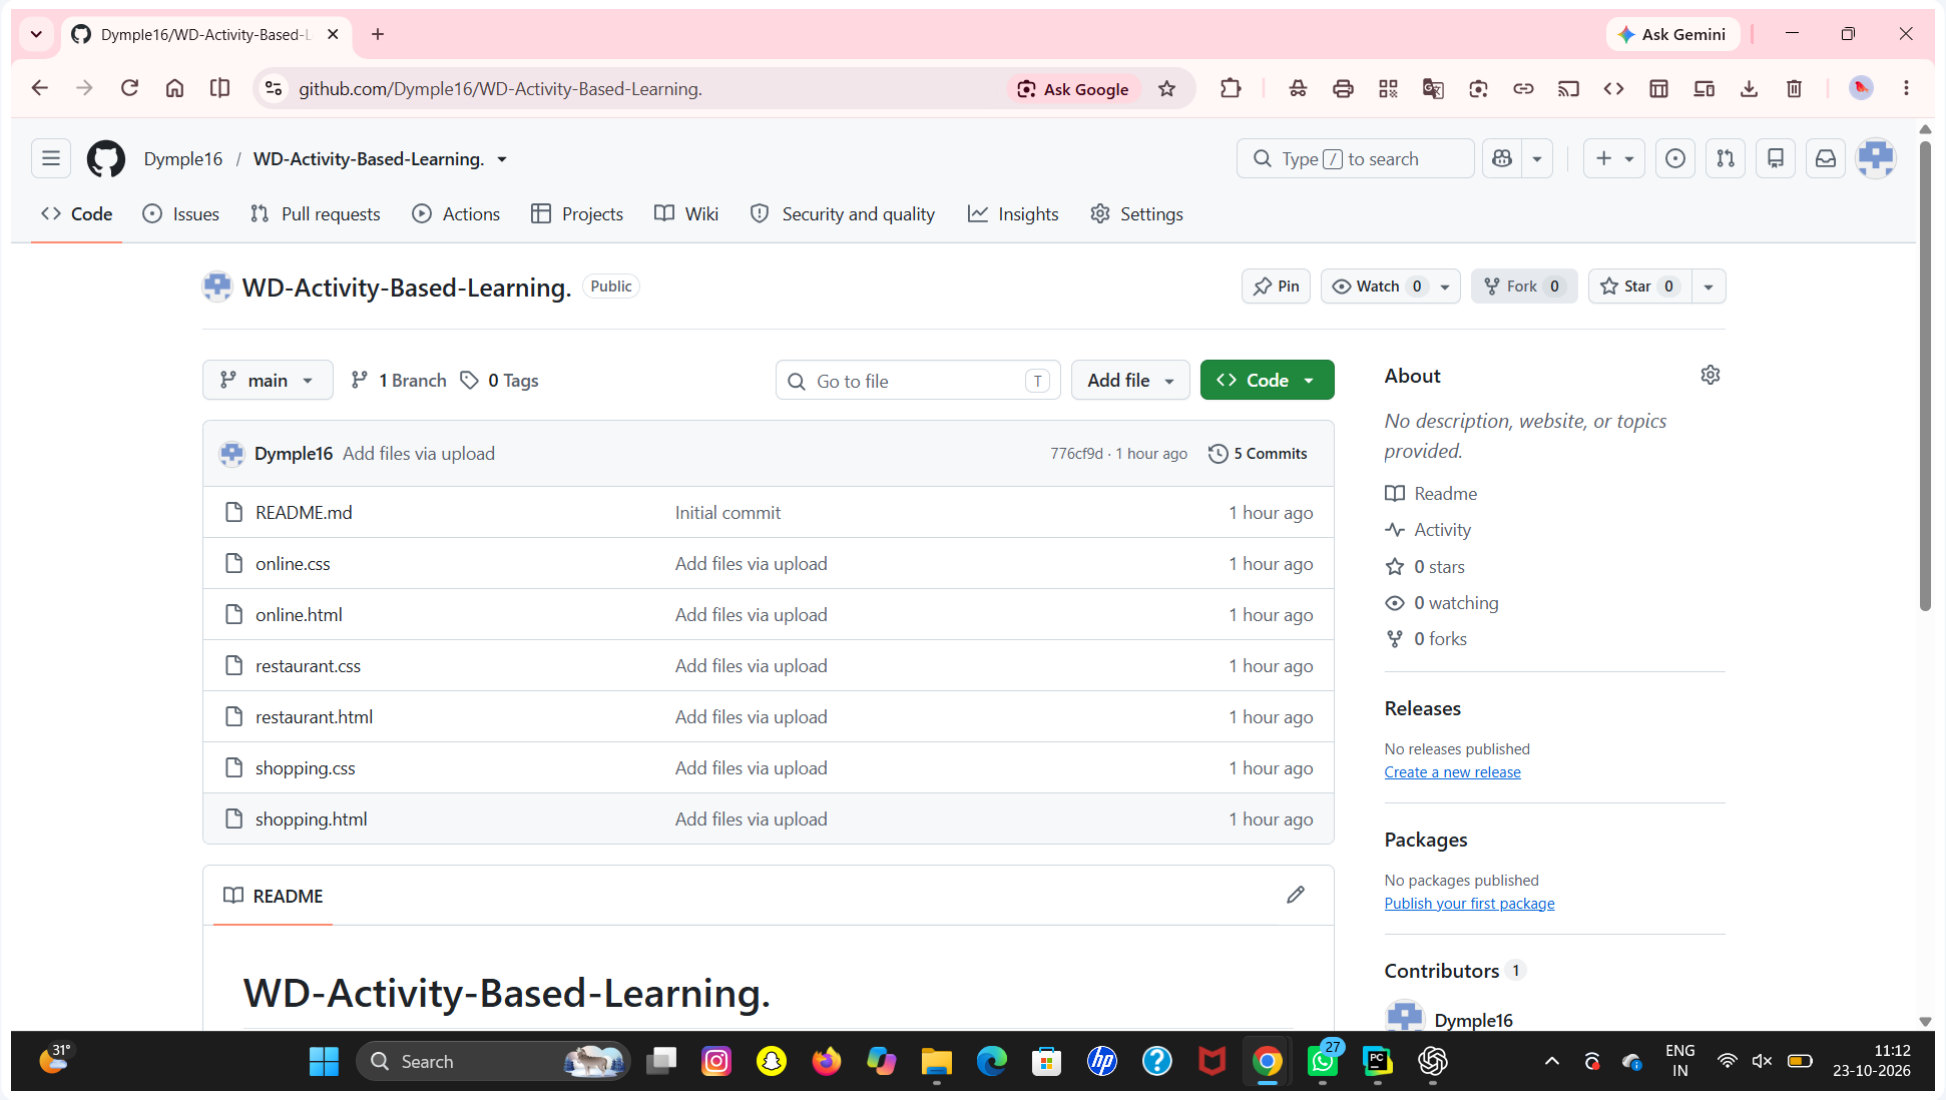

Restaurant introduction, menu, chef profiles, review, location, and booking form.

Foodie Hub

Online food menu with item cards, promotions, delivery details, and reviews.

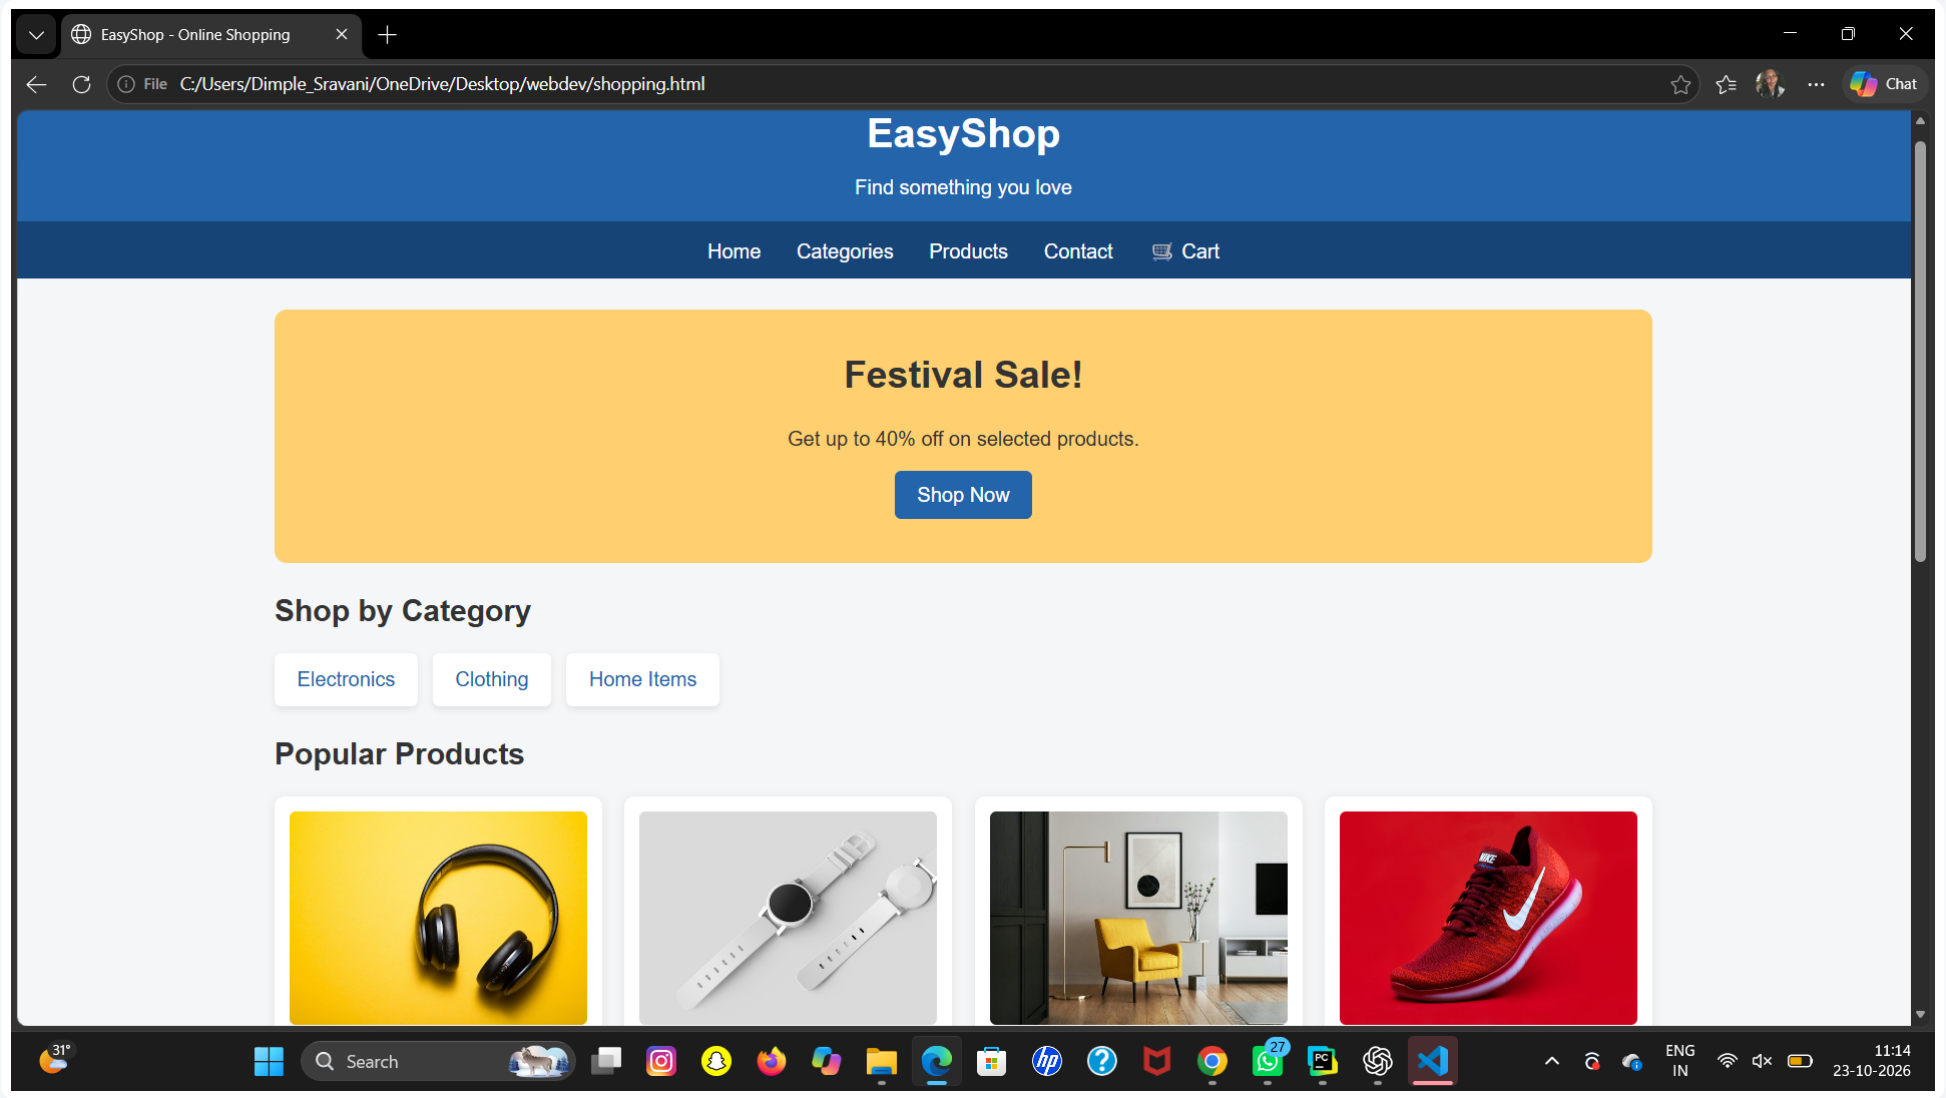

Repository overview

The GitHub repository, WD-Activity-Based-Learning, groups the HTML and CSS files for the sample websites. The visible file list includes separate pages and stylesheets for online shopping and restaurant concepts.

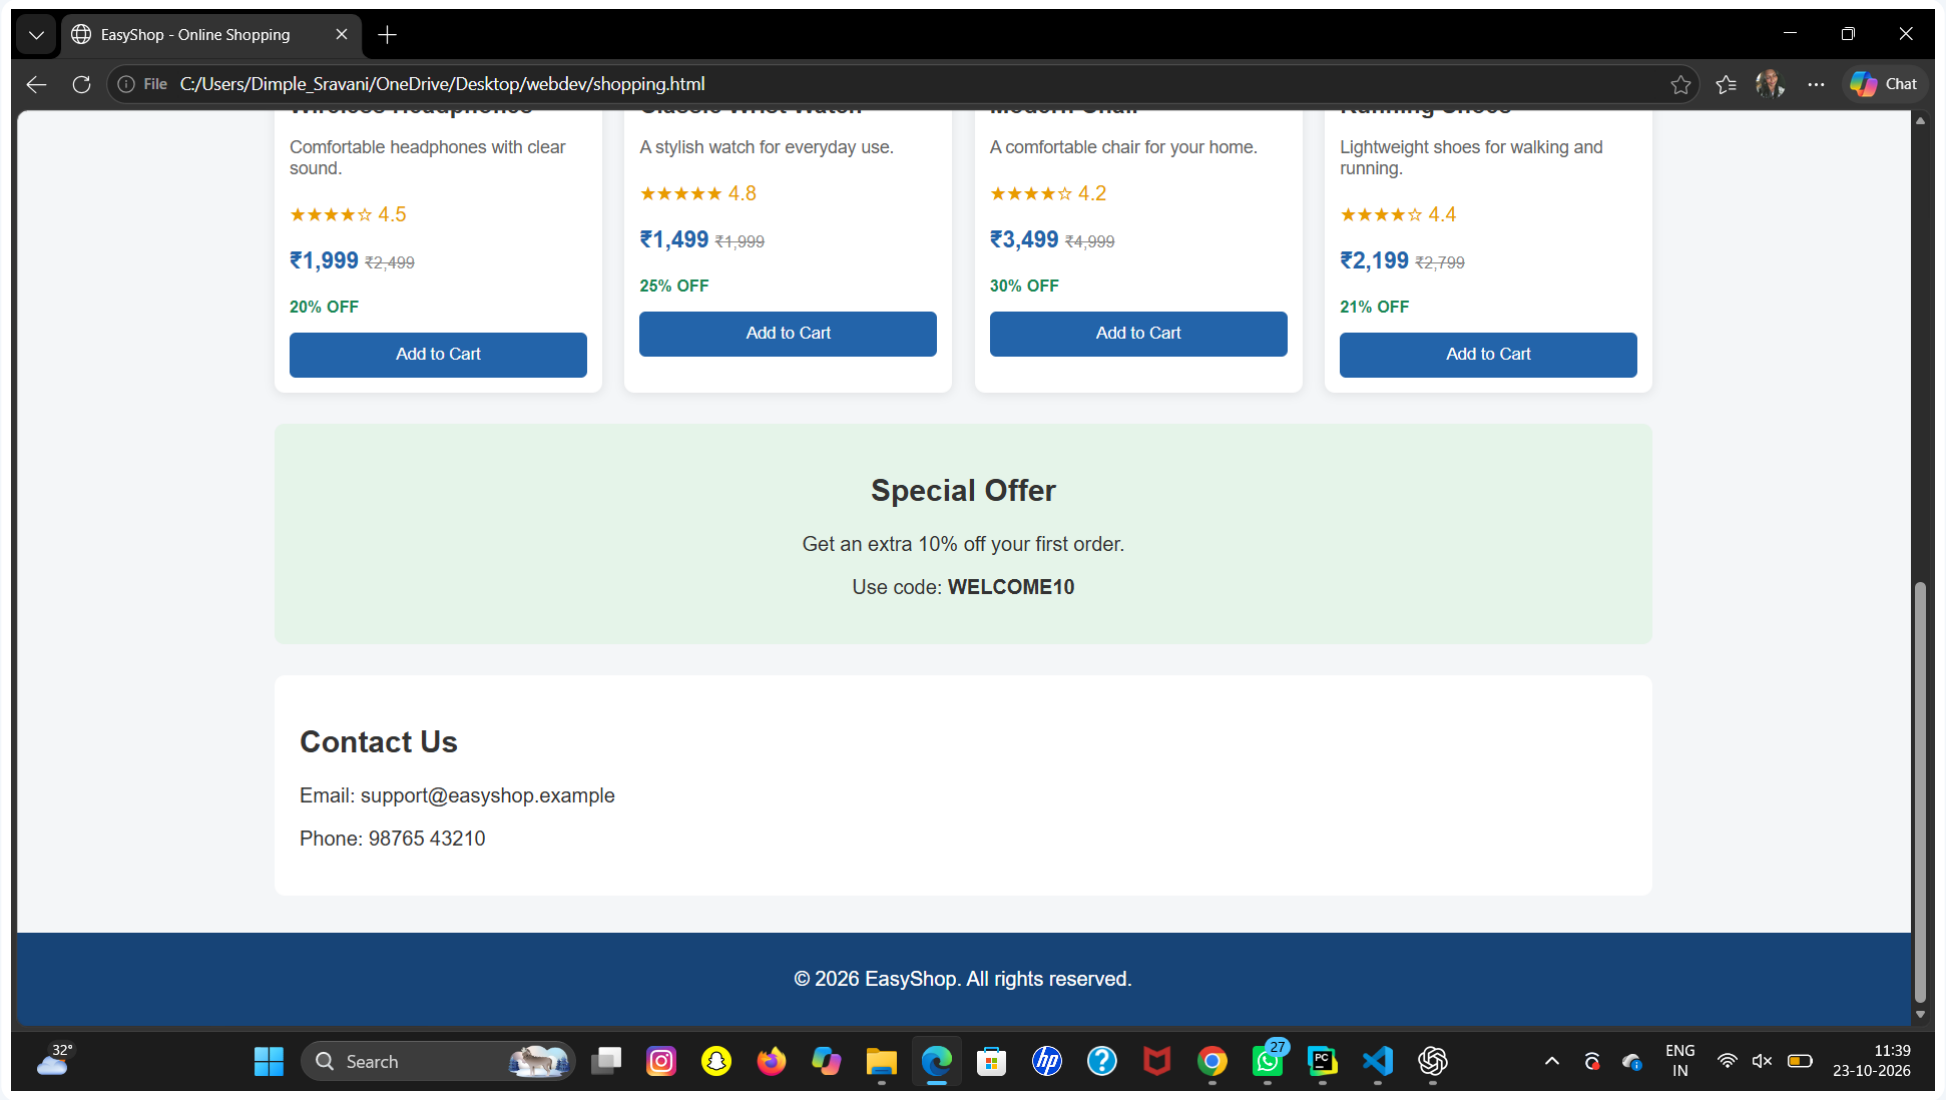

EasyShop: storefront and products

EasyShop presents a simple online shopping storefront with navigation, product categories, featured products, discounts, ratings, prices, and add-to-cart buttons. The page demonstrates how a product catalogue can be organized for browsing.

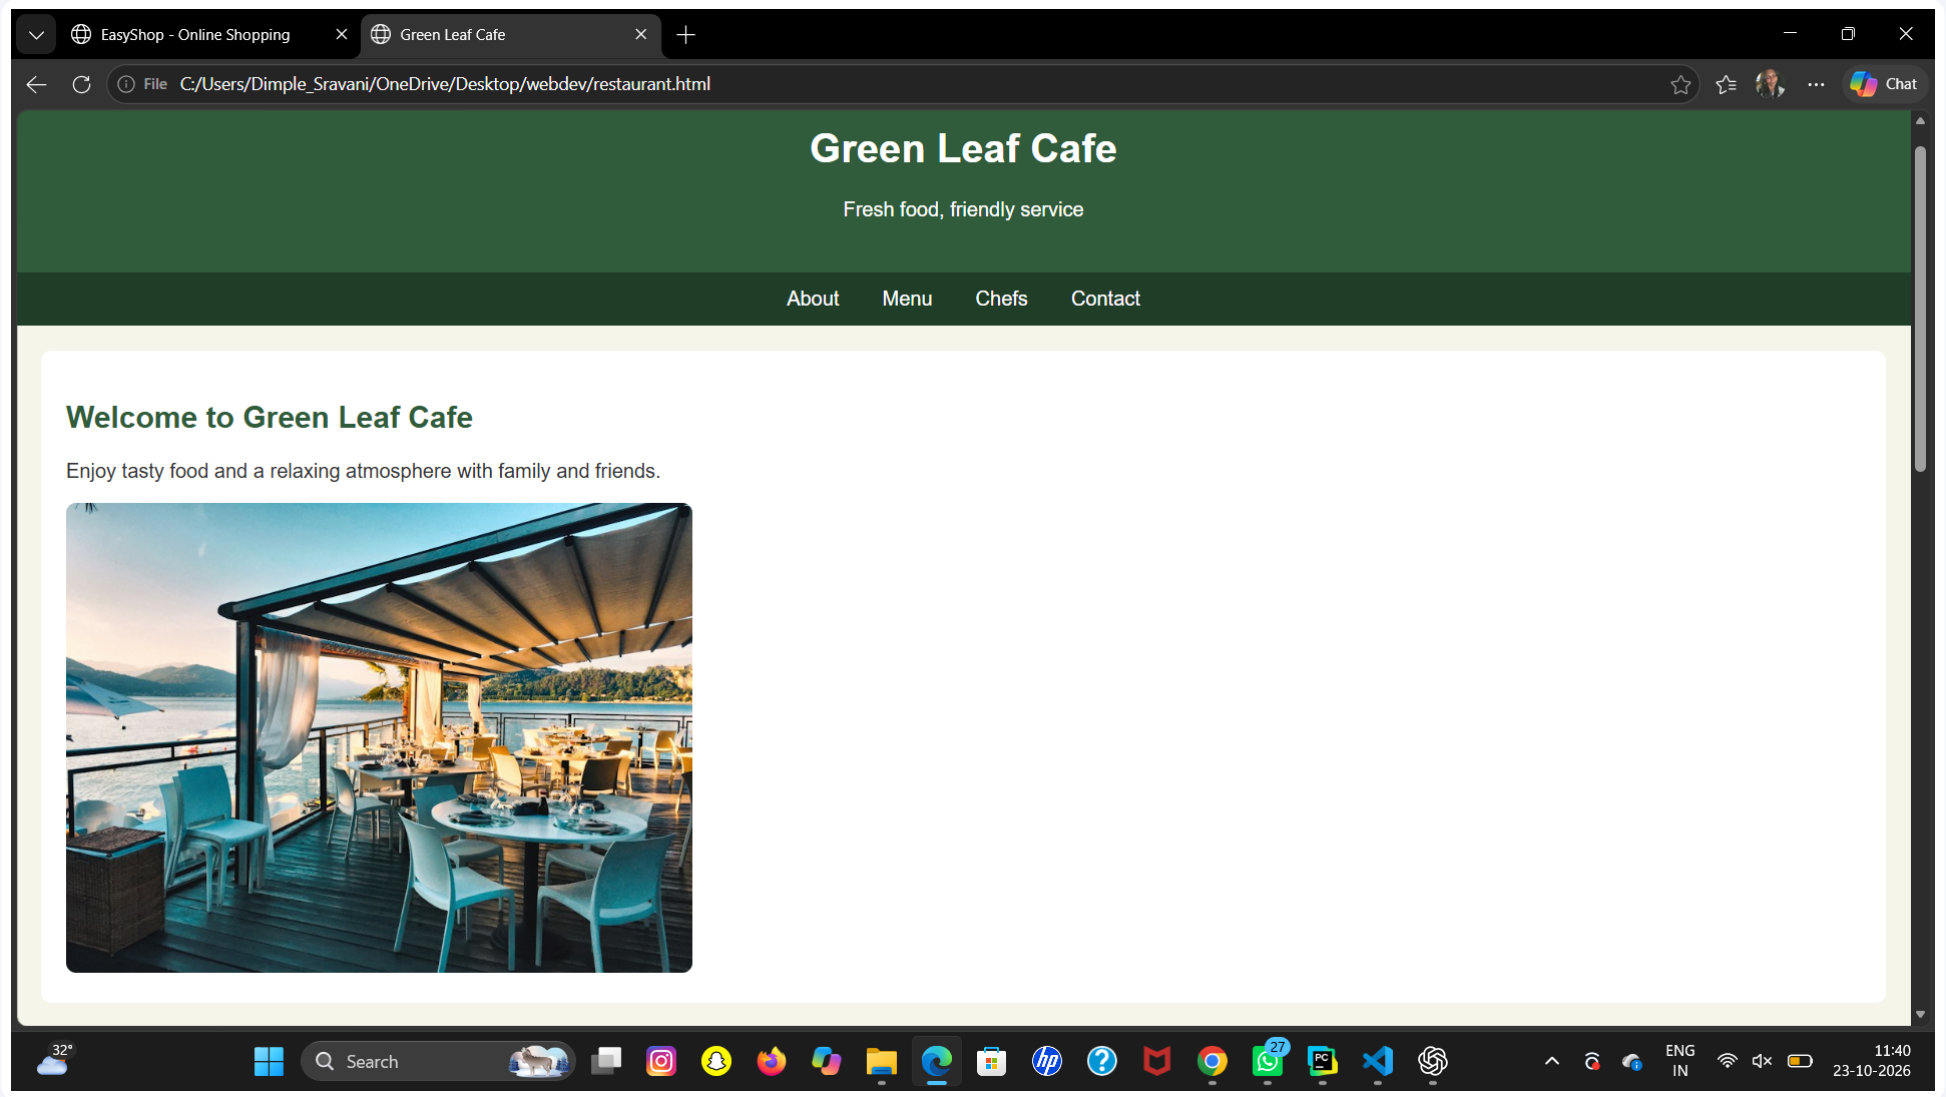

EasyShop: offer and contact

The lower section highlights a first-order offer and contact details. This complements the product cards with a promotion and a way for visitors to reach the shop.

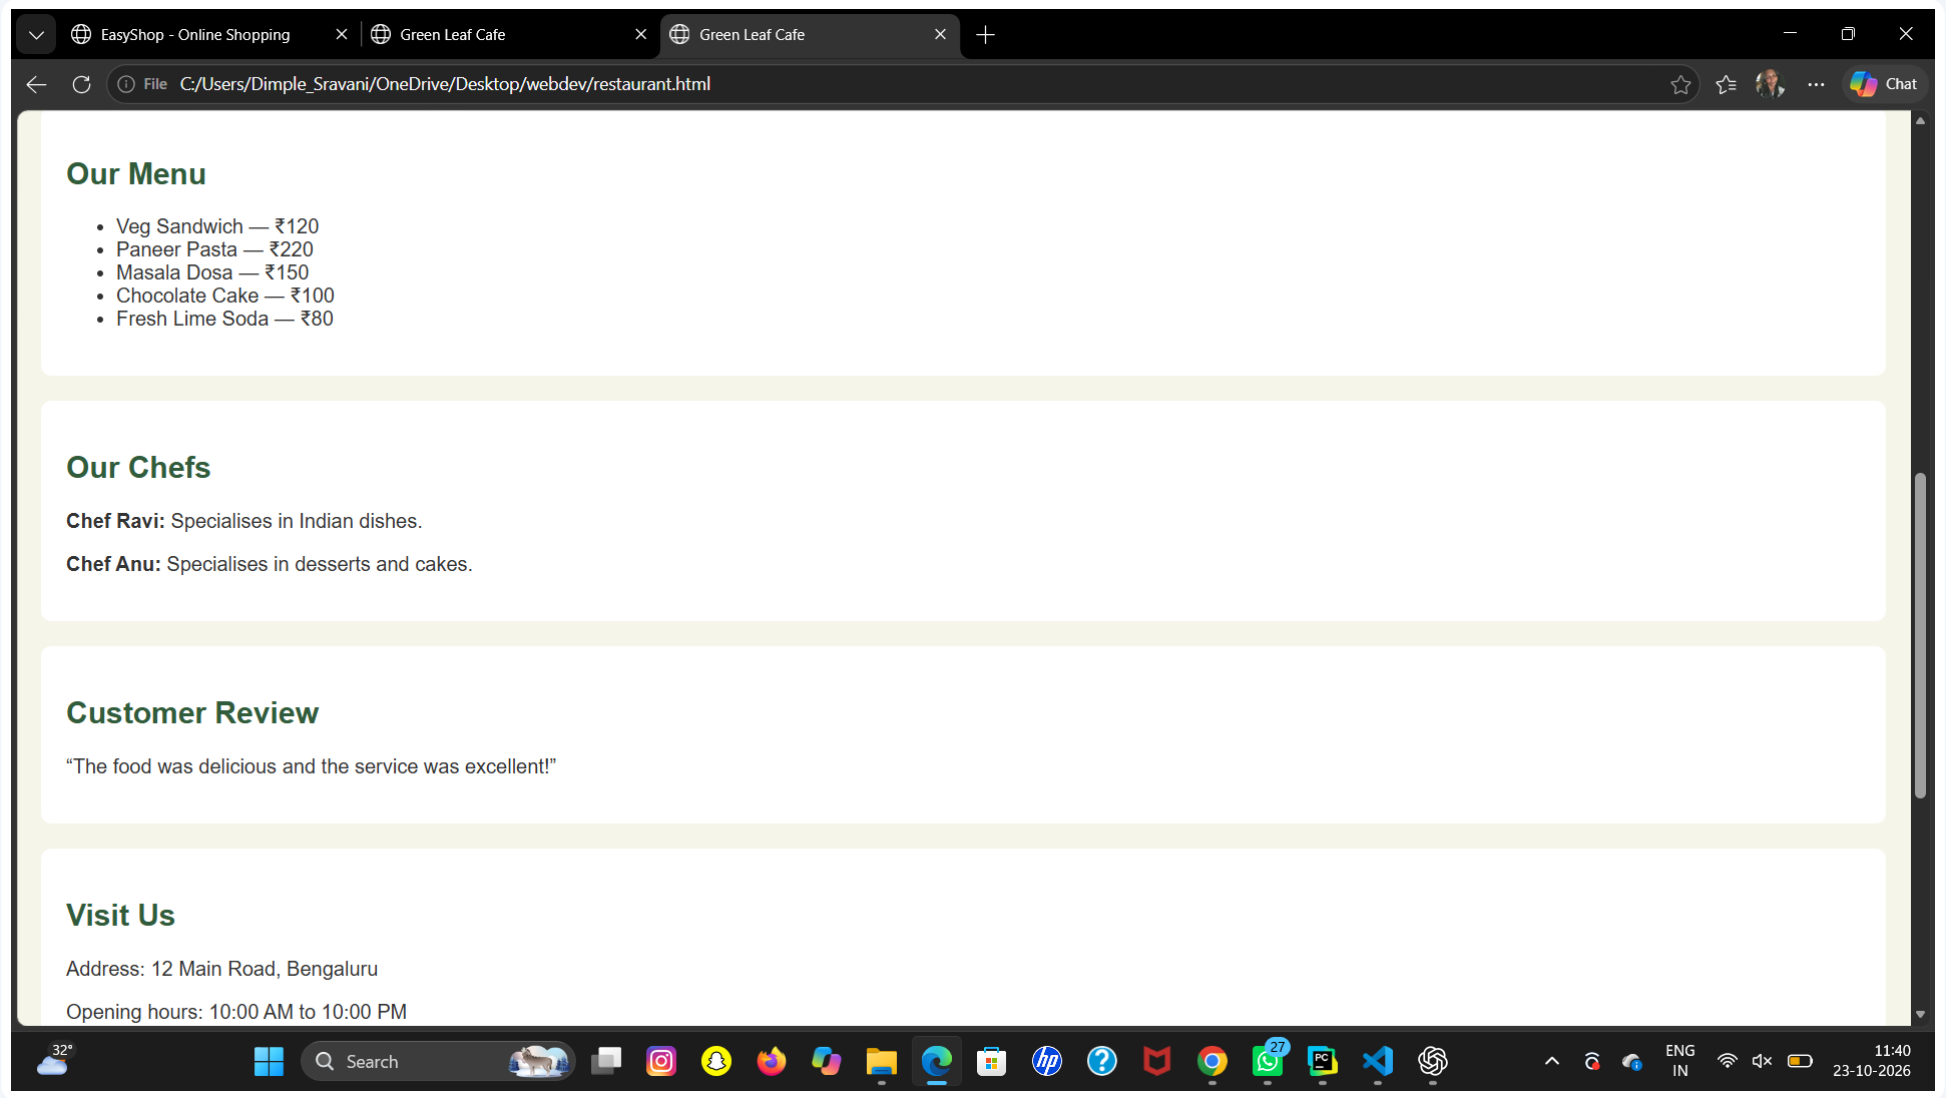

Green Leaf Cafe: welcome page

The cafe website uses a green visual theme, a navigation bar, a welcome message, and a large venue image to introduce the restaurant and its atmosphere.

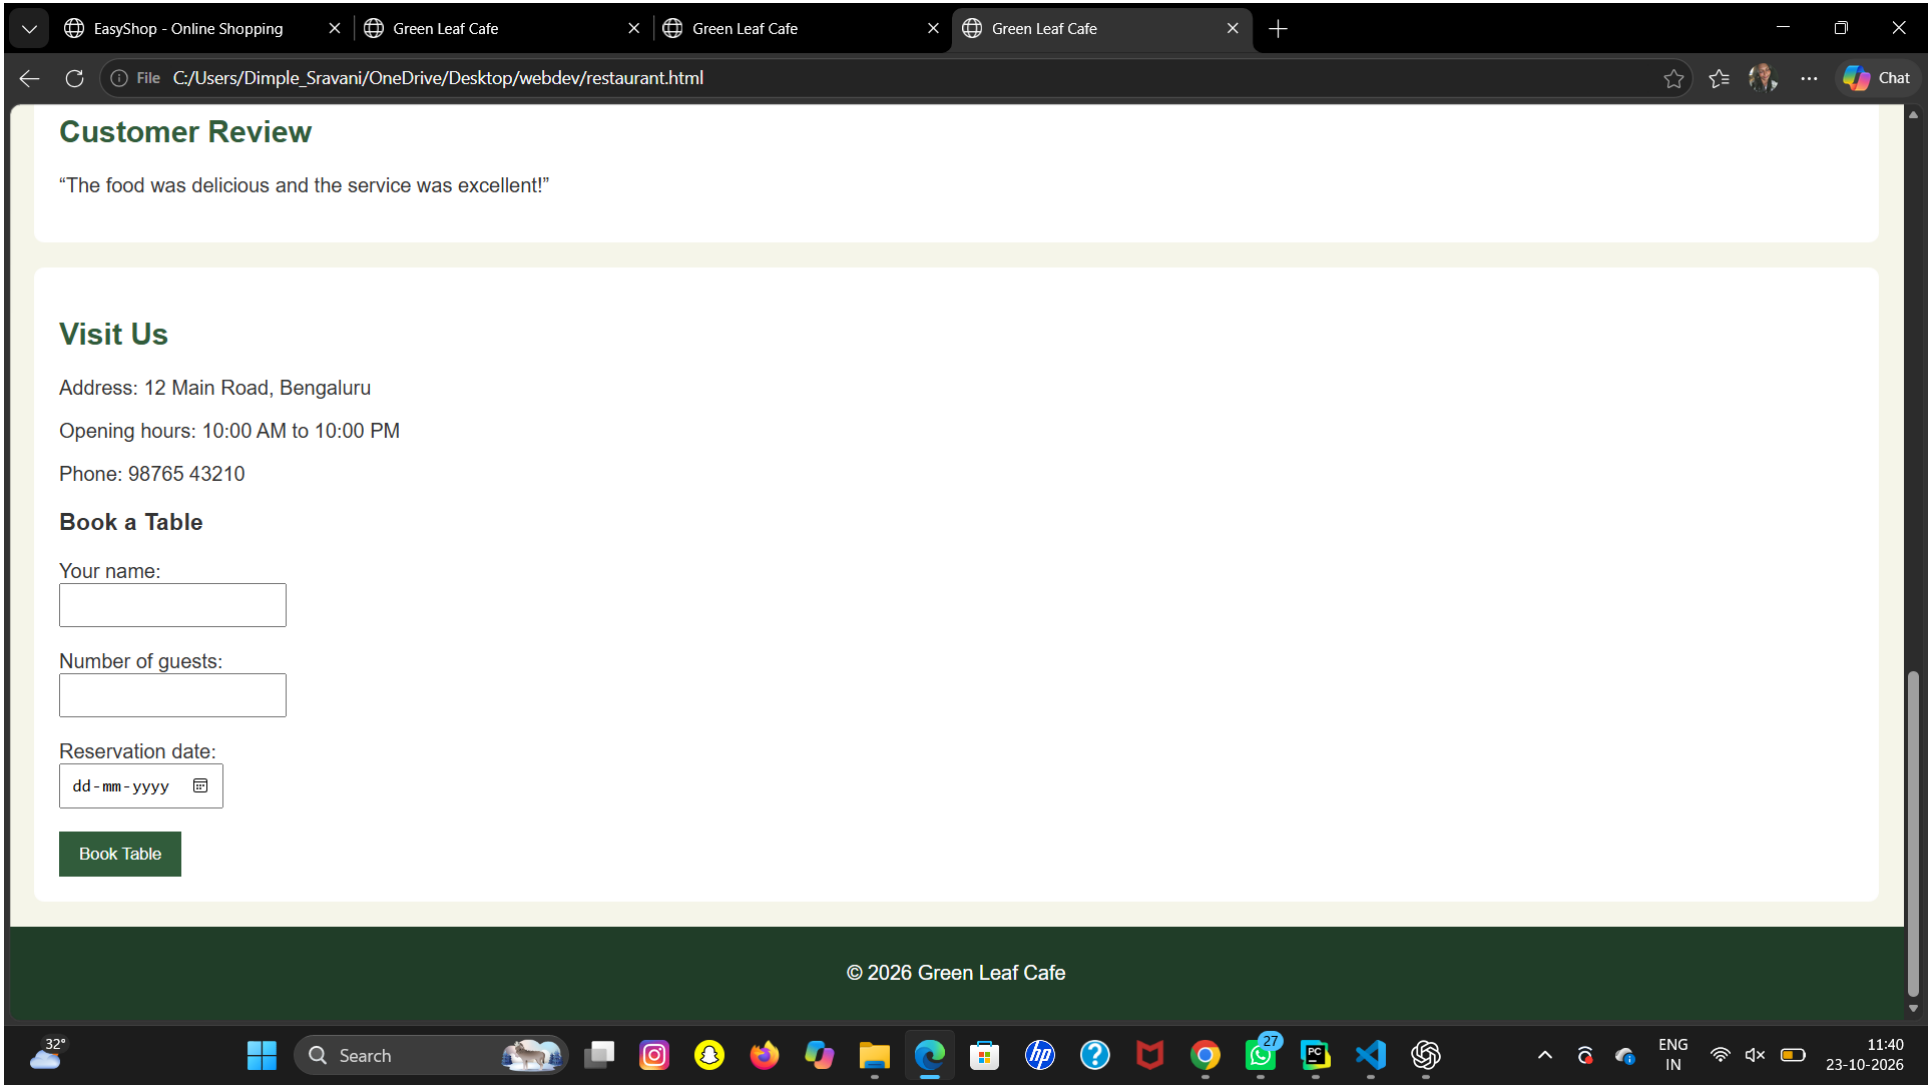

Green Leaf Cafe: menu and team

The page shows a short menu with prices, chef specialties, and a customer review. These sections provide visitors with practical information and social proof.

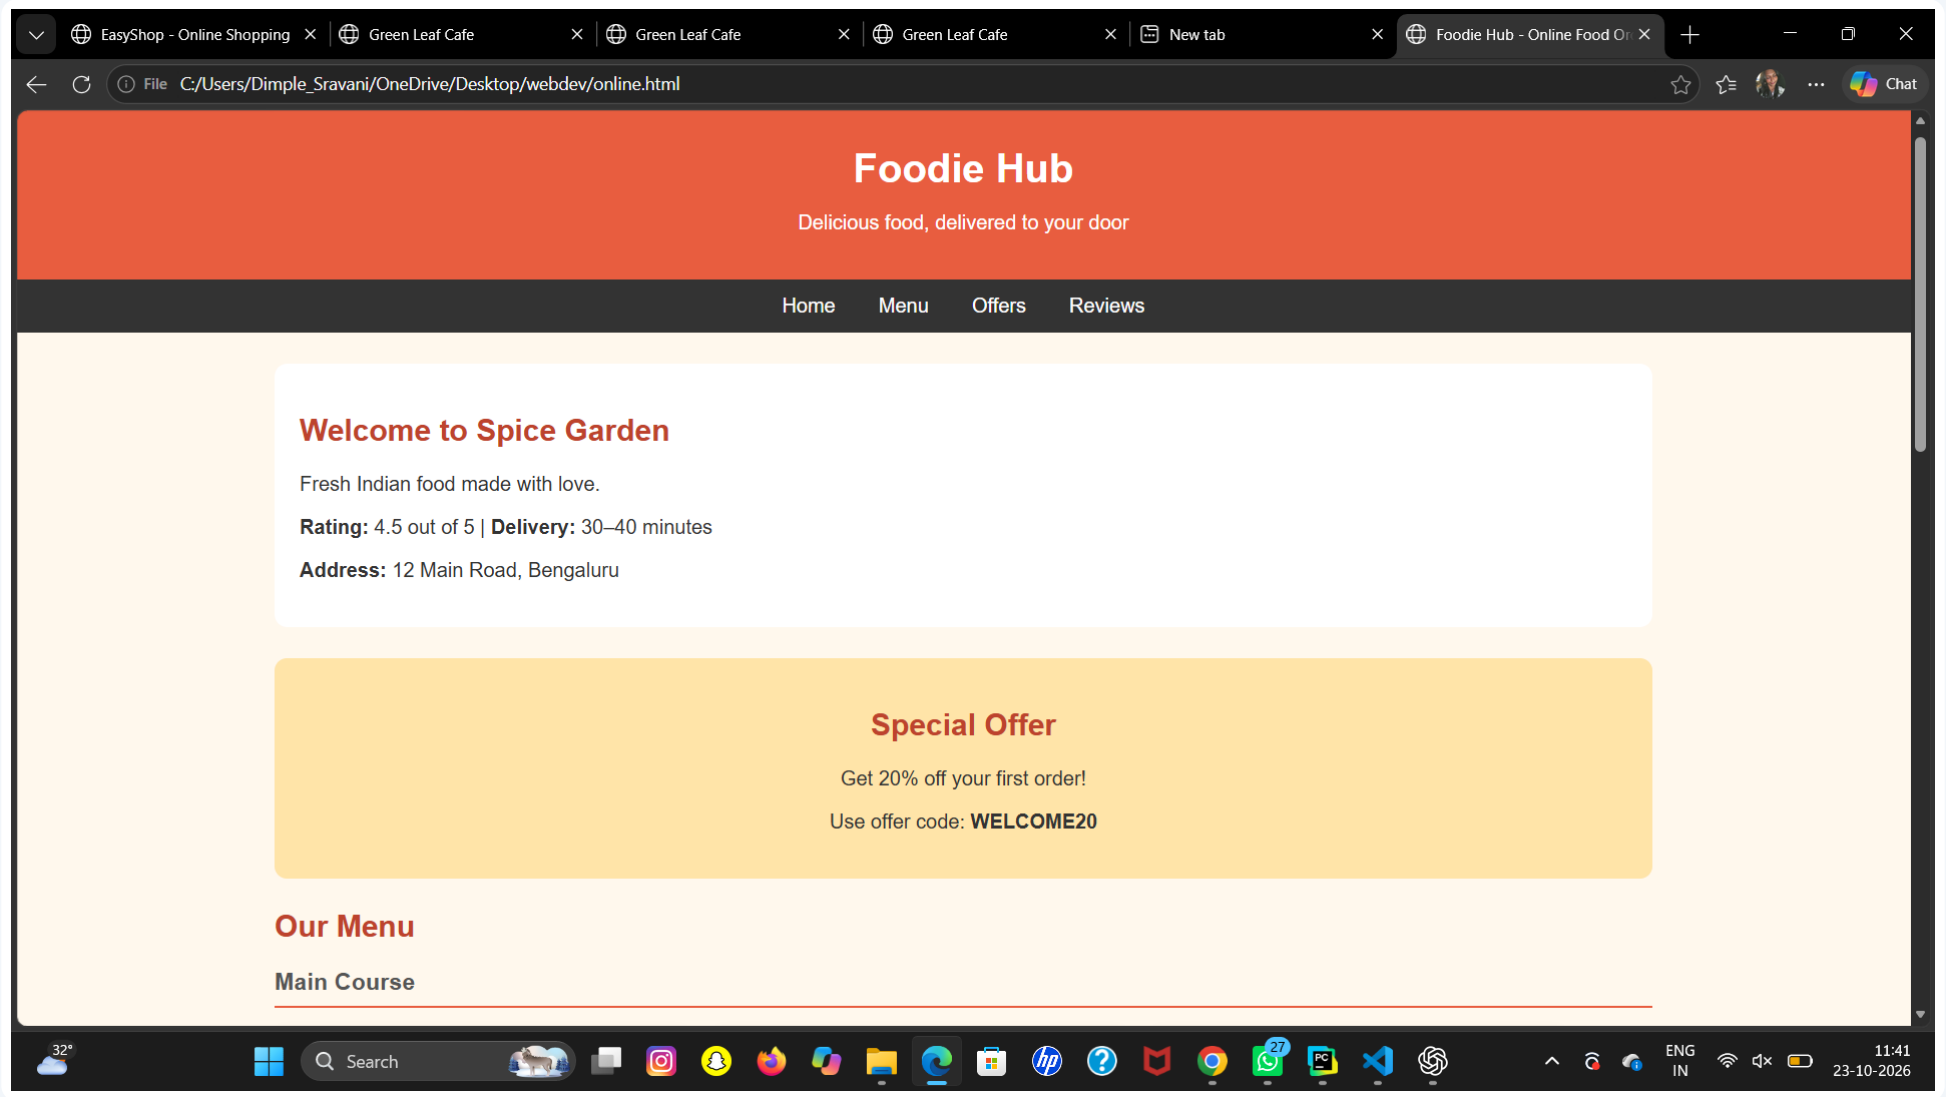

Green Leaf Cafe: visit and booking

The final cafe section provides the Bengaluru address, opening hours, phone number, and a table-booking form with name, guest count, and reservation date fields.

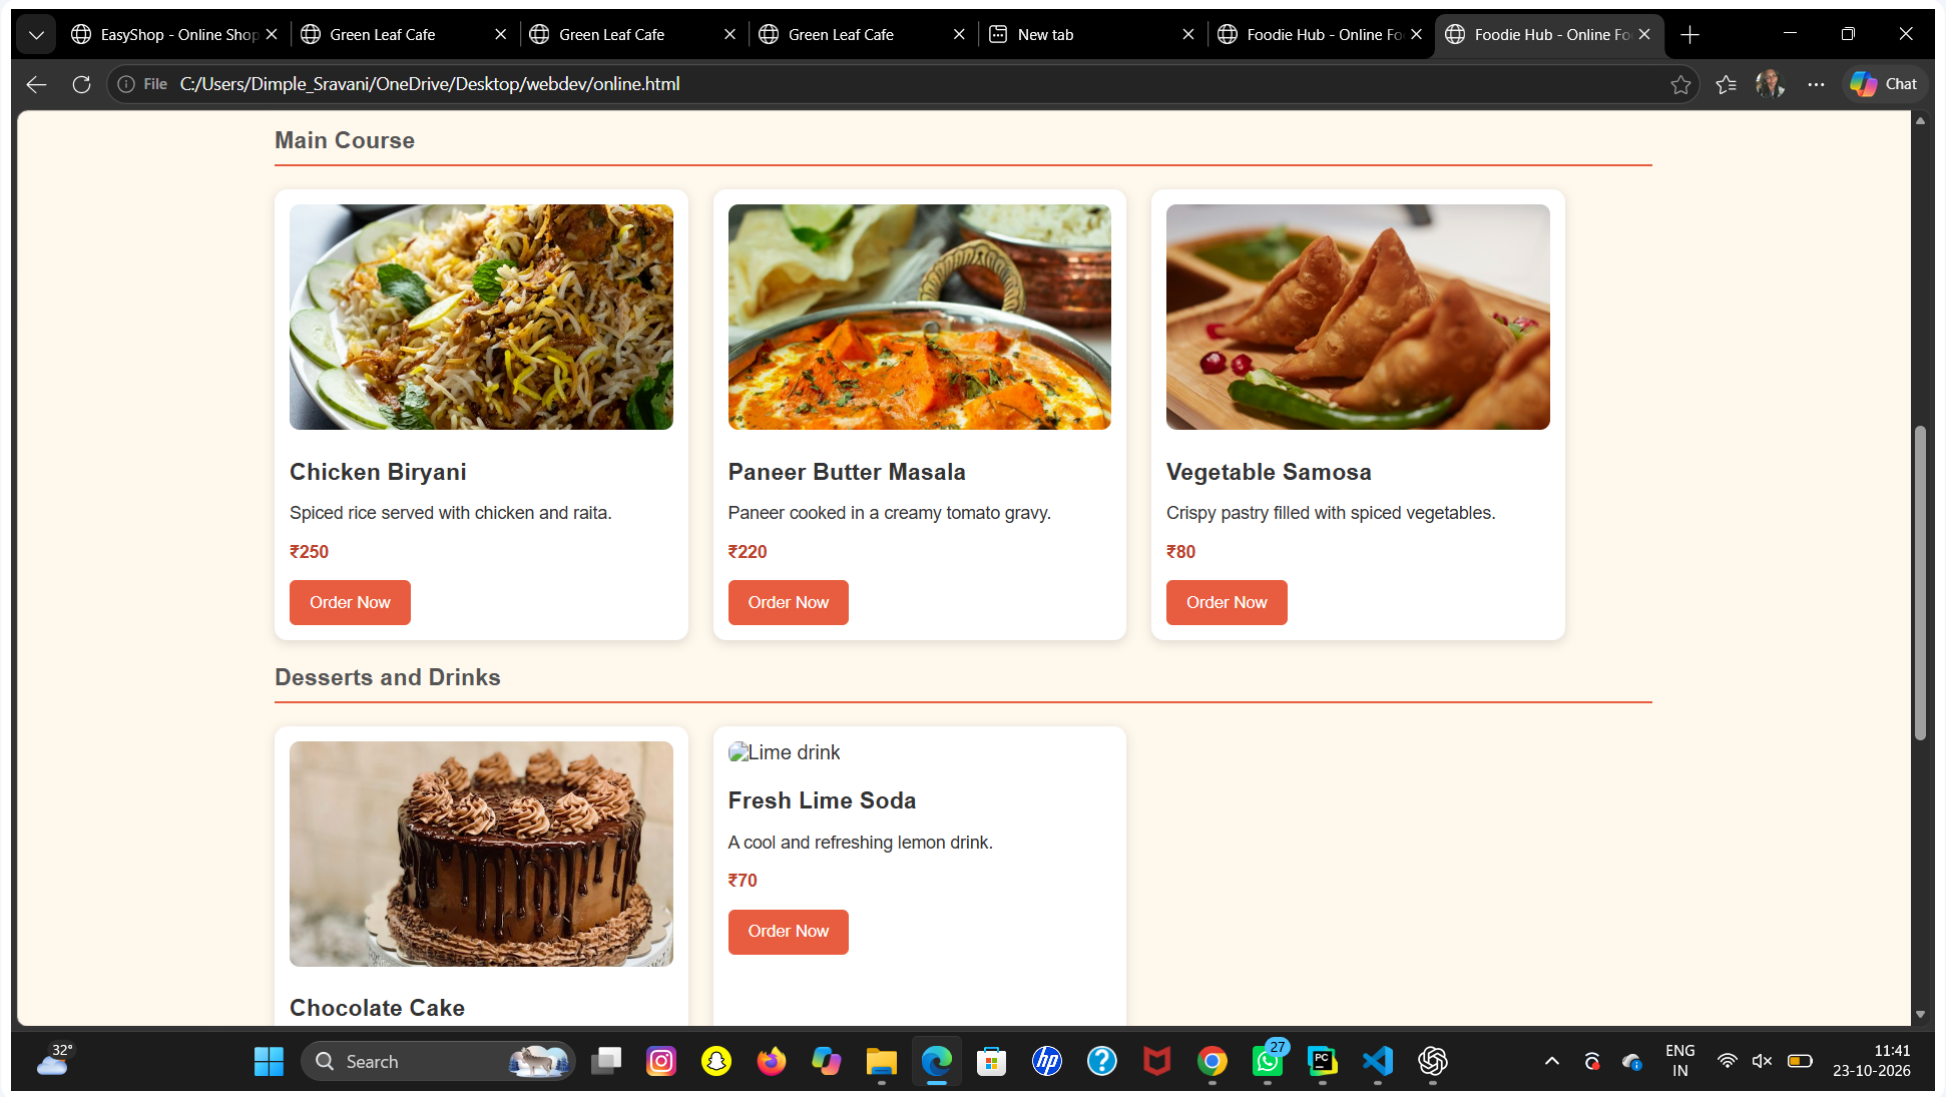

Foodie Hub: restaurant overview

Foodie Hub introduces an online food ordering concept with a restaurant welcome panel, rating, estimated delivery time, address, and a first-order discount offer.

Foodie Hub: menu catalogue

The menu is organized into categories such as main courses and desserts/drinks. Each item card includes a photo, description, price, and order button to support quick menu scanning.

Foodie Hub: customer feedback

Customer testimonials and contact information round out the ordering page. The screenshots show example review content and a phone contact for the restaurant.
